FILE HEADING

Complaint of the Mysore Spinning and Manufacturing Co., Ld., re shortage of the supply of water to their Mills

From

Mr. N. S Sivur, Bangalore

No Petition Dated 7-4-10 Received 8 4 10

Diary No 7261 | Enclos 1 | Spare Copies | Serial No 1

BRIEF ABSTRACT OF LETTER

Complains that for the last 3 or 4 years ~~the supply of water~~ in the Jakkarayan tank, which is the only source of water-supply to the Mills, is not supplying the required quantity on account of the Fruit Syndicate pumping up the percolation water of the Tankey's on the northern side and the Ry Co having drained across the width of the tank by a channel 3 feet deep on the southern side, the tank having been silted up and overgrown with rank vegetation and prays (1) that the pumping of water by the Fruit Syndicate be ordered to be stopped (2) that the Ry Co be directed not to drain away the water of the tank to the prejudice of the Co (3) that the tank be restored by removing the silt &c

NOTES AND ORDERS

NOTES—First sheet

GIB—0000 310

General and Revenue Secretariat

File No. 63 of 1909.

(2)

Serial No.

The shortage of the supply of water to wells is attributed to 4 causes viz;

(1) the percolation water from the Sankey's tank being less copious than before,

(2) the Fruit Syndicate pumping up a very large quantity of the percolation water from the Sankey's tank to the prejudice of the wells of the landholders on both sides of the channel irrigating their gardens;

(3) the silting up of the Jakkarayan tank and its being overgrown with rank vegetation; and,

(4) the Railway Company draining away the water from the Jakkarayan tank by means of a water channel 3 feet deep.

2. Submitted for orders along with Municipal File No. 53) of 09 regarding the complaint of the people of Mallasamudram re the Fruit Syndicate pumping up all the water from the Sankey's tank.

3. A report may be called for from the Deputy Conservator, President

Serial No.

of the Sankey's Tank, has since been settled in G.O. No. D.P.W. 715-23/7102-90 8.8.1914 wherein the supply of percolation water was ordered to be continued under certain conditions. As regards the other garden owners who are reported to be utilizing the percolation water to the prejudice of the mills, the Dy. Commr states that a good many survey numbers of Jakkasandra and Nagangudla Ranganathapur villages are dependent directly or otherwise on the Sankey's tank water and that as such the owners of these lands are entitled to take water without any restriction.

16 The third point, viz the silting of the of Jakkasandra tank, is reported by the Dy. Commr to be true. It is also stated that if the silt has to be removed the Pres[t] of the Bangalore city Municipality will have to be addressed in the matter and an estimate called for if necessary. The Dy Comr also thinks that as the maintaining of a sufficient storage of water in the tank is to the interest of the mills it is but fair that they should contribute a good portion of the cost.

17. As regards the 6[th] point it is reported that the railway authorities have since raised the percolation weir of the railway tank and that in this respect Mr. Sirur's complaint

Note—Contn sheet

Serial No.

has been reduced -

18 The only point now requiring the consideration of Govt is the removal of silt from the Jakkasayan Tank. Submitted for orders.

Hon

11/7/07

It seems plain that the mere fact that the Company has been using the water of the tank does not give it a right to take water from it or to insist that it be deepened and its silt removed at the cost of the Govt or the Municipality or that others be prevented from taking water from the channel by which it is fed - The deepening of the tank does not in any way benefit the Municipality and the Municipal Council would certainly object to any portion of its funds being utilised for such a purpose - The ~~Municipality~~ Tank Syndicate have been permitted to take the water percolating from the Sankey's reservoir on certain conditions ~~Now~~ The complaint against the Railway Company as said above

Sir,

We beg to return to the notice of Government the following circumstances as affect and which to demonstrate the supply of water to the Mysore Spinning & Manufacturing Co. Ltd. which, in their opinion, may prove useful or desirable.

There will be ever about 2 lakhs of gallons required for the water supply of the Jakkuru Tank which is at present dependent entirely on the drainage of the above surrounding hills supply partly by the [illegible] from the nullah. For the last 3 or 4 years the supply has been often unequal during the hot weather and we have

Channel marked C in the plan which is about 3' ft below the water level draws off a depth of 3 ft from this bank into the canal bank below marked D in the plan from which the Railway Company draws its supply mostly electrically driven pumps. We are cut off at times of any water supply by the Irrigation authorities upon the pretext that the water of the Cauvery Bank at Kollegal is short, and the Railway Company emptying the bank to the depth of 3 ft or so through the channel at the other end.

As this by our strength in our mills and other mills afford employment to a thousand subjects of the Government power must be the first need for and this will be mainly required for pumping the Shimsha and the working. There is Engineering

Sir,

In forwarding herewith copy of letter No 59-60 dated 12-7-09, with enclosure, received from the Health Officer, Mysore City, regarding the inefficiency of the filters at Mysore, I have the honor to request that necessary action be taken to render the filters efficient I visited the filters myself last month and found the same state of -- affairs existing that existed some months ago when I went over the ground with Captain Dawes, that is the conditions existing ever since the visit of H R H the Prince of Wales, and which I have so often pointed out to His Highness's Government We are so to speak living on the verge of a precipice so far as the water supply of Mysore city is concerned- & trusting to luck that no slip may happen to hurl us to our end The filters are practically non-existent, & if by any chance one of the many Wayfarers who contribute now to the pollution of these filters is infected with cholera, the result must be an Epidemic in Mysore City

It is therefore exceedingly to [illegible] trusting to luck in this good old British way- "boring to muddle through" somehow

Why can we not learn from Bombay methods with regard to the arc

Letter No. 442 dated the 13th August 1909, from the Executive Engineer, Water Supply & Stores Division to the Chief Engineer of Mysore

---

With reference to Chief Engineer's No. 5885 of 10-8-1909, enclosing copy of Sanitary Commissioner's No. 396 dated 19-7-1909, to the Secretary to the Government of Mysore, General and Revenue Departments,, I have the honor to report as follows:-

I agree with the Sanitary Commissioner that the water supply to the city of Mysore is not as satisfactory as it might be and that it wants to be improved But with due difference to the Sanitary Commissioner I beg to differ from him when he states that the conditions existing now are the same as existed during the visit of the Prince of Wales in 1906. Since that time we have spent Rs 1,00,676 plus Rs 50,000 or Rs 1,50,676/- towards the improvement of the Water Supply

1 We have ensured a liberal supply at all times of the year by the substitution of electric driven pumps instead of old turbines - cost Rs 47,895 plus 50,000 or Rs 97,895/-

2 The wastage from evaporation and percolation that was going in the two storage tanks have been arrested by plastering them with cement Cost Rs 14,126/-

3. Two filter beds have been overhauled and charged with fresh materials after they have been plastered with cement. Cost Rs 4,219/-

10

times (when the works were under the charge of the Municipality) unfiltered water was admitted into it. As the tanks were not cleaned since then the infection was there and continued to make itself apparent in the tests. Now that the tanks have been emptied and will be plastered with cement and made water-tight, I think there will be a marked improvement in the filtered water ere long.

It must also be remembered that the two remaining ~~filtered~~ filters will also be overhauled and that the rearrangement of the pipe connections will enable the rate of filteration and the head to be completely controlled.

I would then (after the last mentioned items have been completed) request the Sanitary Commissioner to conduct a series of careful tests under conditions that will leave no doubt about the accuracy of the results arrived at. If the the results are still unsatisfactory I shall be only too glad to carry out whatever suggestions he may have to make It is only by the Doctor and the Engineer working together thatany improvement can be effected But I am quite confident that after the service tank has been cleaned, the results from the Mysore filters will be quite equal to that we have been getting from the Bangalore filters provided the tests are carefully made at the spot by a careful man

As regards the observation that the filters let in ova of fish into the service reservoir, it is my opinion that it is simply due to the practice of using unfiltered water for cleaning &c, and recharging after the process of scraping But by the present arrangement we can recharge the filters with filtered water and also let the first filtrate to waste for a certain number of hours which is usually 12 hours Of course this can be increased if necessary

From B J Kumaraswami Naik Esq, B.A
Deputy Commissioner,
Bangalore District.

To C S Balasundaram Iyer Esq, B.A
Officiating Secretary to the Government of Mysore,
General and Revenue Departments,
Bangalore.

Sir,

With reference to your office memorandum No. 9358 Rel 43-09-2 dated the 19th April 1910 and 7323 Rel 43-09 dated 7th March 1911, forwarding for report petitions received from Mr R Lewis, Agent to the Mysore Spinning and Manufacturing Company Limited, Bangalore complaining of the growing diminution of water supply to the Mills, I have the honor to state as follows.

2. The causes of the diminution of water supply are stated by Mr Lewis to be four viz (1) the Irrigation Syndicate taking large quantity of water escaping from the Sankey's Reservoir for their Survey and (2) Adjoining garden owners making use of water directly from the feeder channel and the tank (3) Railway company taking water by a channel lower in level than the waste weir and (4) the tank itself losing in capacity by the accumulation of silt and by the growth of rank vegetation

3 With regard to the first cause, the circumstances and the conditions under which permission

permission was given to the Trust Syndicate to make use of the percolation water of the Sankey's tank have been fully reported to you in my letter no 688 dated the 18th March 1910 I may add that nothing has since happened to change my views in the matter viz that the taking of percolation water does not bring about an appreciable diminution in the water of the tank near the Maharaja's Mills Further, the agents in their letter dated 4th April 1910 (enclosed in the vernacular file) have stated that they are not in possession of any order of Government or other authority entitling them to the percolation water of the Sankey reservoir

4. With regard to the 2nd cause, the petitioner Mr Iyer does not specify the survey numbers for which water is being taken unauthorisedly From a statement furnished by the Superintendent of Surveys, I find that a great many Survey numbers of Jakkasandra and Kayarguppa Range villages are dependent directly or otherwise on the Sankey's tank water, as such, the owners of these survey numbers are entitled to take water from the tank without any restriction whatever

5 With regard to the 3rd point it is seen from a file of correspondence in the City Municipal office Bangalore that the Manager of the Thomson United Manufacturing Company having complained to the President, the Railway Department was addressed with the result that [illegible]

Vol

area of the Railway tank (as) agreed by the Railway Department to R.L. 48'55 as suggested by the Municipal Executive Engineer. By this work it is believed that Mr Lima's complaint in this matter has been redressed

6. With reg and to the fourth point it may be true that as also reported by the Municipal the capacity of the Jallikarazana tank has become less by the accumulation of silt and by the overgrowth of rank vegetation. If the government thinks that the removal of silt and vegetation is necessary, the President of the City Municipal Commission will have to be addressed there being no estimate under the tank, so that an estimate may be prepared and the necessity for the work considered in the light of the expenditure involved. As the maintenance of a sufficient storage of water in the tank is to the interest of the Proprietor of the mills, it is but fair that they should contribute a good portion of the cost.

7. The petitions received with the reference under reply are herewith returned together with the sketch. The vernacular file ending with the Bangalore sub Division officer's yadi No 152 dated 26th July 1911 is also herewith submitted for reference and kind return

I have the honor to be,
Sir,
Your most obedient servant

Deputy Commissioner.

Sir,

With reference to your petitions dated the 7th April 1910 and 18th February 1911 complaining of the gradual diminution of water supply to the mills from the Sankey Tank on account of:—

(1) the percolation water of the Sankey's tank being utilized by the Fruit Syndicate and

SUBJECT

the water in the feeder channel of the Jakkasandra tank by the ryots of the adjacent lands for irrigation purposes,

(2) the Railway authorities draining away the tank water by a channel lower in level than the waste weir, and

(3) the accumulation of silt in the tank,

I am directed to inform you that the Dy. Commr. of the Bangalore Dist., who was directed to make an enquiry into the matter, reports that no authority has been produced by the agents of the Company showing that they are entitled to the percolation water of the Sankey's tank and that the taking of that water by the Trunk Syndicate does not, in his opinion, bring about an appreciable diminution in the water of the tank near the bund, and also that the owners of lands in Jakkasandra and Ranganathapur
